(54) Title: A DISPLAY APPARATUS WHOSE SIGNAL PROCESSING UNIT IS SEPARATED

(57) **Abstract:** The present invention relates to a flap type display apparatus, and particularly to a display apparatus in which an image display unit such as a LCD panel, and a driving circuit, i.e., a signal processing unit for controlling the image display unit, are separated each other. A display apparatus whose signal processing unit is separated according to the present invention is comprised of: an image display unit for displaying an image; a signal processing unit installed separately independent of the image display unit, for converting external signal so that the image display unit operates; and a signal connecting unit for connecting the image display unit and the signal processing unit.
